Requirement Analysis
Data Flow Diagram & User Stories

Date	08 September 2026
Student Name	Vijjapu Madhuri
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	

Data Flow Diagram

The DFD below represents the request flow described in the project instructions: requester submission through Service Portal, catalog variables, Flow Designer automation, Network Database record creation, approval, email notification, and status update.

Actor / Component	Data / Action	Next Component
End User / Requester	Accesses Service Portal → searches Network Requests → fills required details → submits request	Network Request Catalog Item
Network Request Catalog Item	Collects catalog variables and variable-set information	Flow Designer
Flow Designer	Get Catalog Variables → Create Record → Send Email → Ask for Approval → If/Else → Update Record	Network Database / Approval Request
Network Database	Stores request details and Approval Status	Approver / Status Tracking
Approver	Reviews approval request and approves/rejects according to configured approval rules	Flow Designer
Email Notification	Communicates request progress to configured recipients	Relevant stakeholders

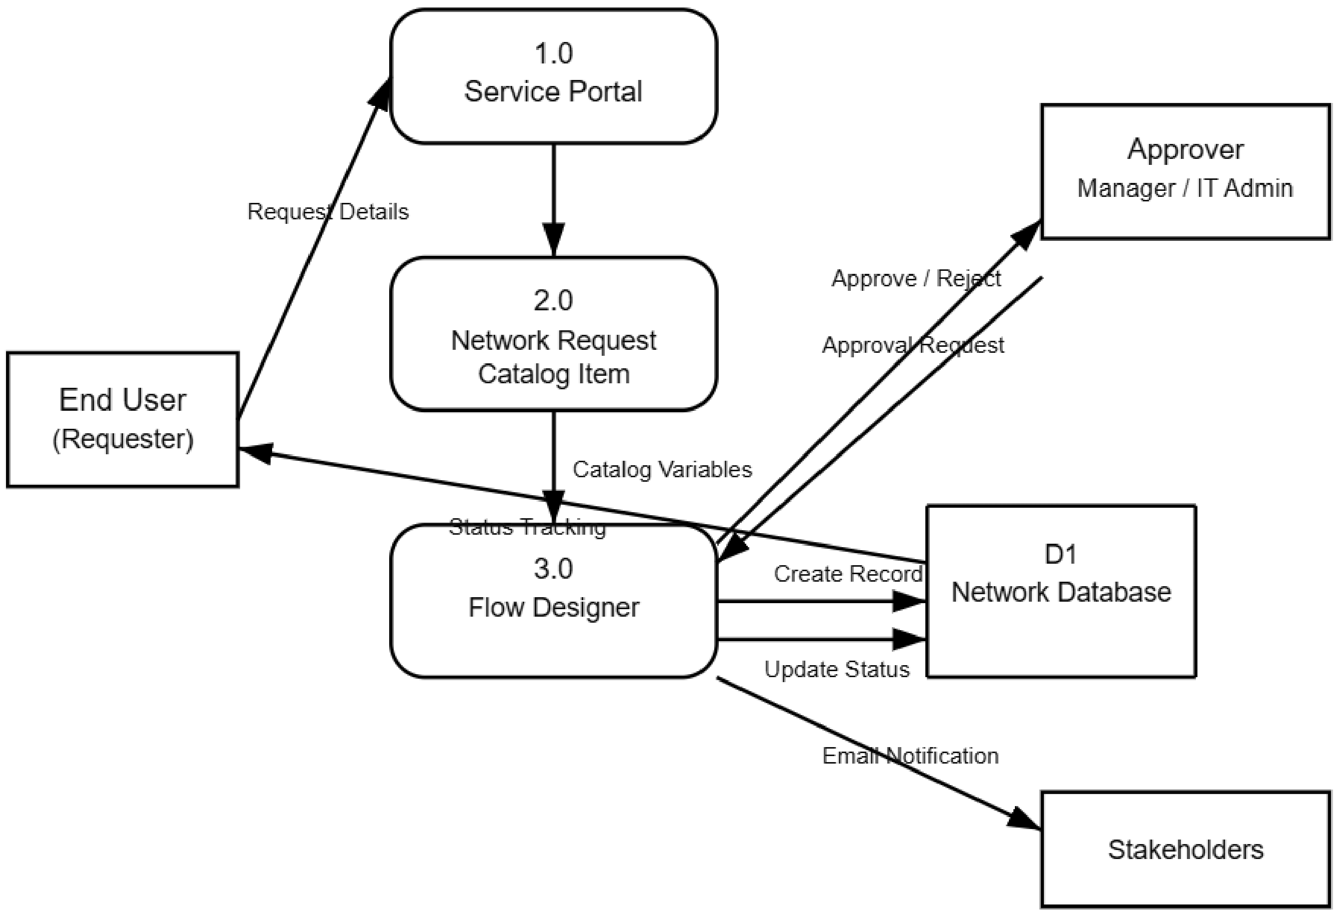

Figure 1: Request data flow for Automated Network Request Management.

User Stories

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
End User (Requester)	Network Request Submission	USN-1	As an end user, I can open Network Requests in the Service Portal and submit a network service request.	The Network Request item is accessible and a request can be submitted with all required details.	High	Release-1
End User (Requester)	Request Details	USN-2	As an end user, I can enter the required network request information through the catalog form.	Required variables are available and mandatory information can be entered.	High	Release-1
End User (Requester)	Dynamic Form	USN-3	As an end user, I can see the Existing ID field when the Type of Connection is Existing.	The Existing ID field appears when the configured condition is satisfied.	Medium	Release-1
End User (Requester)	Request Tracking	USN-4	As an end user, I can check the approval status of my request.	Approval status is stored and maintained on the Network Database record.	Medium	Release-1
IT Admin	Automation	USN-5	As an IT admin, I can automate the network request lifecycle using Flow Designer.	The configured flow performs the required actions after catalog submission.	High	Release-1
IT Admin	Data Record	USN-6	As an IT admin, I can create a Network Database record using submitted catalog variables.	Create Record fills the defined Network Database fields.	High	Release-1
Approver	Approval	USN-7	As an approver, I can review a network request and approve or reject it.	An approval request is generated and the configured decision is recorded.	High	Release-1
Network Fulfilment Team	Request Processing	USN-8	As a network fulfilment team member, I can use the centralized Network Database record to carry out and track network changes.	The record includes the required request and approval information.	High	Release-1
Relevant Stakeholders	Notifications	USN-9	As a relevant stakeholder, I can receive email updates about request progress.	The Send Email action delivers the configured notification.	Medium	Release-1
IT Admin	Security	USN-10	As an IT admin, I can use configured ACLs to limit read and write access to the custom table.	The defined ACLs are applied to the custom table as required.	Medium	Release-1
