Customer Problem Statement

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An End User / Requester	Raise a network service request through the Service Portal and track its progress	Manual handling may delay request completion and make status updates less visible	A straightforward submission method and centralized status tracking are required	Concerned about processing time and visibility
PS-2	An IT Admin	Maintain ServiceNow configurations and workflows with as little manual effort as possible	Repeated manual tasks can increase the volume of tickets that must be handled	Dependable automation and simple workflow maintenance are necessary	Concerned about additional manual workload

Define the Problem Statement

USER Employees who submit network service requests, together with IT administrators, network fulfilment team members, and approvers.	PROBLEM Manual processing and possible human errors can influence network request fulfilment, creating a need for consistent workflows, approvals, and centralized request tracking.
NEED Service Catalog setup, form configuration, approval routing, Flow Designer automation, and email-based notifications.	IMPACT Lower manual effort and errors; speed up request fulfilment; make workflows and approvals consistent; improve request visibility and tracking; provide a better end-user experience; and support IT and security compliance.
HOW MIGHT WE? How might we simplify and automate the complete lifecycle of network service requests in ServiceNow?
