Empathize & Discover — Empathy Map Canvas

Date	08 September 2026
Student Name	Vijjapu Madhuri
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	

Empathy Map Canvas

Dimension	End User / Requester Perspective
Says	Looks for an easy and user-friendly way to raise a network service request and expects quicker processing with clear visibility of its status.
Thinks	Expects the request form to collect all necessary details clearly, wants the process to be simple, and values being able to check the request status.
Does	Opens the ServiceNow Service Portal, looks for Network Requests, enters the required information, and submits the request.
Feels	Prefers a quicker and dependable service experience and may feel unsure when there is limited information about the current request status.
Pain Points	Manual processing, missing or incomplete request details, human errors, limited status information, and delays in completing requests.
Needs / Goals	Easy request submission, quicker turnaround, transparent status tracking, faster fulfilment, and dependable network service delivery.

End User (Requester) — Empathy Map

SAYS “I need a simple and user-friendly way to submit a network service request.”		THINKS Wants the form to capture the necessary information clearly and expects the overall request process to be straightforward.
	REQUESTER	
DOES Uses the Service Portal, searches for Network Requests, enters the required details, and submits the request.		FEELS Wants a quicker and more dependable service experience and may feel uncertain when request status information is limited.

Pain points: manual effort • incomplete request information • human error • limited status visibility • slower fulfilment
