

# Automated Network Request Management in ServiceNow

**Persona:** End User / Requester

**Goal:** Submit a network request easily, track its status and get timely fulfilment with minimal effort.

|                                                                                                                                                                  |  <b>1. Awareness</b><br>User learns about the service or needs to raise a request. |  <b>2. Access</b><br>User navigates to the Service Portal and finds the Network Request option. |  <b>3. Submit Request</b><br>User fills in the form with required details and submits the request. |  <b>4. Approval</b><br>Request goes through the approval process automatically via Flow Designer. |  <b>5. Fulfilment</b><br>Network team processes the request, creates the database record and executes the changes. |  <b>6. Notification</b><br>User receives updates through email and can track the status in the portal. |  <b>7. Completion</b><br>Request is fulfilled and user confirms the service is active and working. |
