

Requirement Analysis

Solution Requirements (Functional & Non-functional)

Date	08 September 2026
Student Name	Vijjapu Madhuri
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	

Functional Requirements

The following are the functional requirements for this project, based strictly on the provided instructions.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Network Request Service Catalog	Create a new catalog item named Network Request under the Network category in the Service Catalog.
FR-2	Network Request Form & Variables	Collect these fields on the form: Requested For, Mobile Number, Type of Connection, Existing ID, Total Amount, Mode of Payment, Address, and the Opened on behalf of variable set.
FR-3	Dynamic Form Behaviour	Show the Existing ID field only when the Type of Connection is set to 'Existing'. Set up mandatory fields as required.
FR-4	Network Database Record Creation	Automatically create a record in the Network Database when a user submits a form. This record must include: Database Number, Assignment To, Mobile Number, Total Amount, Mode of Payment, Type of Connection, Customer Address, Approval Status, and Requested For .
FR-5	Approval Request	Create and display approval requests linked to the Network Database record. Route these requests through the correct approval process.
FR-6	Flow Designer Automation	When a form is submitted, trigger a flow that runs these steps: Get Catalog Variables, Create Record, Send Email, Ask for Approval, If/Else logic, and Update Record .
FR-7	Email Notifications	Send automatic emails from the workflow to the correct people using the linked target record.
FR-8	Request Status Tracking	Track and update the Approval Status on the Network Database record so users can see the current progress.

FR-9	Access Control	Use default Access Control Lists (ACLs) on the custom table to limit who can read or change the data based on roles.
FR-10	Validation & Testing	Test the system to make sure mandatory fields, auto-populate features, approvals, form submissions, emails, and data entry all work correctly.

Non-functional Requirements

The following non-functional requirements are based directly on the project instructions. If a specific technical target was not given, it is noted as 'not specified'.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The form must be simple, easy to use, change dynamically, highlight required fields, and show clear status updates.
NFR-2	Security	Default Access Control Lists (ACLs) on the custom table control who can view or edit data based on user roles.
NFR-3	Reliability	Comprehensive testing confirms that approvals, tasks, records, emails, data entry, and workflows all run smoothly without errors.
NFR-4	Performance	The goal is to complete requests faster and cut down manual work. No specific speed metrics are provided.
NFR-5	Availability	The system is built on the ServiceNow Personal Developer Instance (PDI). No extra backup systems are mentioned.
NFR-6	Scalability	The system uses standard ServiceNow data structures and Flow Designer automation. No specific scaling limits are mentioned.

Solution Requirements — Functional Coverage

FR	Functional Area	Coverage
FR-1	Service Catalog	A Network Request catalog item is placed under the Network category.
FR-2	Request Form & Variables	Captures Requested For, Mobile Number, Type of Connection, Existing ID, Total Amount, Mode of Payment, Address, and Opened on behalf of data.
FR-3	Dynamic Form Behaviour	The Existing ID field appears only when Type of Connection is 'Existing'. Mandatory fields are configured properly.
FR-4	Database Record Creation	The system saves Database Number, Assignment To, Mobile Number, Total Amount, Mode of Payment, Type of Connection, Customer Address, Approval Status, and Requested For to the custom database.
FR-5	Approval Request	Approvals are created as related items and follow the designed approval steps.
FR-6	Flow Designer Automation	Form submissions trigger a flow to read variables, create records, email users, ask for approval, apply logic, and update status.
FR-7	Email Notifications	Automated emails are sent out from the workflow to the designated recipients.
FR-8	Status Tracking	The Approval Status field on the Network Database record reflects the current state of the request.
FR-9	Access Control	Standard table ACLs restrict read and write permissions to authorized users.
FR-10	Validation & Testing	Thorough testing checks required fields, auto-fill logic, approvals, forms, emails, and data correctness.
